Overview

GanzSe FREE Character Accessories – Fantasy Low Poly Pack is a free stylized low-poly accessory collection designed for fantasy characters, modular heroes, NPCs, creature races, and RPG character customization.

This pack includes a selected set of character accessories from the GanzSe fantasy accessory series: separate left and right animal ears, separate left and right horns, a cloak, a backpack, and a jewelry set with rings, an earring, and a necklace.

Every accessory is provided in **3 color variations**, giving you an easy way to create multiple character looks while keeping a consistent stylized fantasy art direction.

The jewelry set includes **two ring shapes** for different finger styles, a complete necklace, and separate chain and pendant models for more flexible customization. All accessories use clean low-poly geometry and readable silhouettes, making them easy to combine with stylized humanoid characters, beastfolk, demons, adventurers, NPCs, and fantasy creatures.

This free pack is ready to drop into your project as a compact starting set for character customization, fantasy RPGs, adventure games, survival projects, and stylized mobile or desktop games.

★ If this kit helped your project – please leave a review on the Asset Store!
Your feedback supports future updates and helps fellow devs know what to expect.

Thanks for creating with GanzSe!

Technical Appendix

Jewelry Attachment Guide

Character Accessory Attachment Guide

All accessories are separate static meshes and can be attached to a character rig using simple empty GameObjects as mount points.

1. Create empty mount GameObjects under the appropriate character bones:
2. • **LeftEar_Mount / RightEar_Mount** — under the Head bone for animal ears
 - **LeftHorn_Mount / RightHorn_Mount** — under the Head bone for horns
 - **Cloak_Mount** — under the upper Spine, Chest, or Neck area
 - **Backpack_Mount** — under the upper Spine or Chest bone, positioned on the back
 - **Necklace_Mount** — under the Neck or Upper Chest bone, positioned in front of the neck
 - **Earring_Mount** — under the Head bone or an ear bone, when available
 - **Ring_Mount** — under the preferred finger bone
3. Parent the selected accessory prefab to its mount point.
4. Adjust local position, rotation, and scale to fit the character model.
5. For rings, choose the **round** or **square** version depending on the finger shape.
6. For necklaces, use either the complete necklace prefab or place the chain and pendant separately.
7. Save the finished setup as a **Prefab Variant** for quick reuse on other characters.

 **Tip:** Check the accessories with idle, walk, run, and attack animations to make sure they follow the character correctly and do not clip into the head, body, hair, armor, or clothing.
